

News at matec

At matec we have started new year full of **vim** and **vigour** and hope that also for you the year has begun **successfully**. This year as usual to reduce delivery times we will manufacture machines available at short notice for our customers. Enclosed you can find information on these machines.

We are pleased to inform you that we have started to deliver milling/turning machining centres in series with a new control system **Heidenhain TNC 640**.

Moreover we have extended our gantry series. We can also offer **matec-30 P (HSK-A63)** and **matec-40 P (HSK A-100)** with columns running on the ground and machine table situated directly on the floor.

Last but not least, we have developed motor spindle with **hydraulic clamping** in order to achieve optimal stiffness for turning operations.

As you see we keep it interesting.

Best regards from Köngen
matec Maschinenbau GmbH

Erich Unger
Managing Director

Control: Heidenhain TNC 640

Special features of this control:

- Possibility of 5-axes machining, milling and mill/turn machining
- workshop oriented programming with graphic support
- independent and external programming

Innovation: floor-running Gantry Machine

Your advantage:

- + X-axis 3.000 - 50.000 mm
- + Y-axis up to 4.000 mm
- + Z-axis 1.500/1.800 mm
- + High load capacity
- + Forklift loading

Open House, 13th -15th of June, 2013

Finally, you should keep this date free. We are pleased to inform you that this year our Open House will be held in Köngen again.

Date: 13th -15th of June, 2013
